OneNeck Role

Mr. Grant is actively leading the team to implement OneNeck's Data Modernization and Application Modernization Strategy. He also plays a critical leadership role in driving Microsoft Azure business and solutions. Mr. Grant is an expert in Azure Platform as a Service (PaaS), including App Services, Azure SQL, Azure Functions. Additionally, he has proven expertise in Azure AI as well as established knowledge of Azure DevOps.

Personal Philosophy

"My customers know that they can come to me with anything. They know that I, and by extension OneNeck, have their back. I am always available for them to discuss any questions or concerns they may have, and I know I have a team that I can call on to help me find the best solution, no matter what."

"Instead of just being a CSP that sells you Azure, we have a readily available skilled team that will help you architect your solution, whether it's in data modernization, application modernization or any other area of Azure, we have people on our team that cover the breadth of Azure's services."

Keep moving forward.
WE GOT YOUR BACK.
