

Nick Santilli
Practice Director – Security & Enterprise Networks

Areas of expertise:

- DevOps/Programmability
- Cyber/Info Security
- Risk
- Collaboration
- Contact Center

As the practice director focused on Security & Enterprise Networks, Nick Santilli leads the cybersecurity and enterprise networking engineering teams at OneNeck IT Solutions. He is responsible for strategic direction in these practice areas and spearheads the onboarding of new products and services, channel partnerships, sales enablement, solution architecture (pre-sales engineering) and advanced services (post-sales engineering).

A veteran technology professional, Nick has been with OneNeck for more than a decade. Throughout this time, he has built and led engineering teams while developing, selling and implementing highly-complex IT solutions across many verticals.

During his tenure at OneNeck, Nick has specialized in—and developed—multiple technology practices. This includes cybersecurity, his most recent focal point; and, previously, the Contact Center Enterprise team, of which he was a founding member. His attention to detail and development/adherence to business processes have built efficiency and repeatability and are key factors to the success of these practices.

Nick currently works out of the office in Denver, Colorado. Prior to OneNeck, Nick was a software engineer and information architect, designing and programming enterprise web portals for prominent telecom companies.
